Evening Brief

Date: Saturday October 10th, 2020

Weather Summary

*** Cold Front with Strong Winds, Higher RH and Precipitation through Sunday ***

Precipitation has begun to move into Western Idaho and will spread across the rest of Idaho and Wyoming through Sunday. Precipitation will also dip down into far northern Nevada and northern Utah. The best chances of wetting rains will occur over central and eastern Idaho into Wyoming, especially in the higher terrain with snowfall likely above 6,000 feet. Precipitation in Utah and Nevada will be more spotty, with the best chances of any wetting rains north of I-80 in the higher terrain of the Northern Wasatch and the higher terrain of far northern Nevada. Southern areas are expected to remain dry with this front.

Weaker disturbances will bring additional precipitation to parts of Idaho/Wyoming toward the early and mid-portion of next week, continuing the seasonably cool conditions there. Elsewhere, high pressure over the West Coast will begin to build eastward across the Western Great Basin, with sharply warmer and drier conditions once again across much of Nevada and eventually western Utah.

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 4	New Fires and Acres: 15 fires for 1,789.3 acres / 1,374 acres Large Fire Growth

*** Fuel and Fire Behavior Advisory Remains in Effect for Southern/Eastern Nevada into Southern Utah ***

The prolonged above normal temperatures and very dry conditions of the past two weeks have pushed fuels to near record levels for this time of year in most areas, and in the southern half of the region, fuels are near all-time record dry levels.

Live Fuel moisture in low elevation brush remains critically dry, between 60-100% in most areas, which correlates with extreme fire behavior.

This weekend, a large, long duration precipitation event across northern areas should bring significant and long-lasting moistening of fuels to those areas. However, south of the Idaho border, precipitation will be much more scattered and lighter, with the southern third of the Great Basin getting no precipitation, with fuels remaining at critically dry levels.

Rapid warming/drying across Nevada will rapidly dry fuels early this coming week...with gradual drying further east.

North of the Idaho border, additional weak disturbances this coming week will keep cooler, more moist fuels conditions in place.

Resources:

Aviation within the Great Basin

- 0 VLAT, 2 LATs, 0 CL-415
- 16 SEATs, 0 FB, 7 AA, 0 ASM, 1 LP
- 7 Type 1 Helicopters / 6 Comm.
- 6 Type 2 Helicopters / 6 Comm.
- 16 Type 3 Helicopters / 13 Comm.

Crews Committed within the Great Basin
